

Tekirdağ Un-Multirex Factory; While producing quality products that meet the needs of our customers, it accepts as a duty to reduce its environmental impact, to prevent environmental pollution, to support the sustainability of natural resources in the axis of the philosophy of continuous improvement in all its activities.

The following policy principles have been adopted for this objective:

- To establish an Environmental Management System in order to continuously improve our environmental performance and to ensure compliance with all legal and other obligations to which we are bound,
- To ensure that cleanliness and order are adopted as a life philosophy by our employees, contractors and suppliers,
- To increase environmental awareness by training and supervising all our employees and contractors,
- To ensure that matters such as spills and leaks that may have an environmental impact are included in the emergency plans and their periodic application,

As a result of training, continuous improvement and supervision;

- Reducing water consumption during the process, cleaning and daily domestic use,
- To reduce energy and natural resource consumption,
- To reduce the amount of waste and increase the recovery/recycling rate by supporting recovery and re-evaluation activities,
- Reducing our waste packaging amount,
- To prevent pollution by using new or developed appropriate technologies in our production process and products,
- To prevent wastage of raw materials and to ensure that by-products generated during production are re-evaluated by licensed companies rather than disposed of as waste.
- All our employees undertake to be in harmony with the environment and to establish and maintain the environmental culture in their fields of duty and responsibility within the framework of this policy.
